

Solar Made Simple

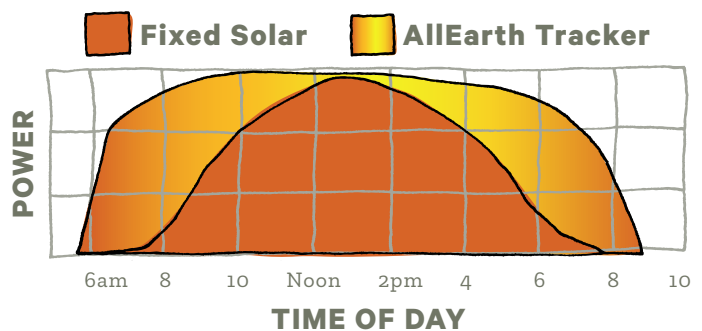

Let us help your town, school, business or non-profit cut operating costs, lock in energy rates, and take a giant step toward energy independence.

At AllEarth Renewables, we believe that there are better, more responsible ways to power our lives. We have the technical expertise and experience in inventing new, more efficient energy solutions. And we have the passion, urgency, and desire to create a more stable energy future. But business alone can't incite the radical change needed in our energy infrastructure—it will take individuals, communities and business working together.

So join us, and be a part of the change.

Our dual axis trackers follow the sun to produce up to 40% more energy than fixed solar panels.

The AllEarth Solar Tracker is a complete grid-tied dual axis solar electric system that uses GPS and wireless technology to follow the sun throughout the day for optimal energy production. The tracker's 360° range allows it to produce up to 40% more electricity than fixed systems, resulting in a more guaranteed savings from your solar installation.

Go Solar In 4 Easy Steps

Consultation

We'll assess your electricity usage and look at your site for solar exposure to determine the best solar solution to meet your needs. We'll outline the financial benefits of solar power, including incentives and reduced electric bills. We can review financing options too.

Permitting

We'll cover the costs of registration and submit your registration to the VT Public Utility Commission.

Installation

Our highly-skilled field technicians will install your solar system and connect it to the grid quickly.

Technical Support

If you have any questions or concerns after installation, we will be there to help. We offer a comprehensive maintenance and service program to ensure your tracker always performs optimally.

A Smart Business Choice For Your Future

- No upfront or maintenance costs
- Support the environmental and local economic benefits of solar
- Utility bill savings
- Protection from electric price volatility
- Reduce carbon footprint

Quality & Reliability You Can Count On

The best energy solution won't matter if it isn't reliable and well built. AllEarth Solar Trackers are American engineered and manufactured. The components are smart, robust, trouble-free, and backed with a 10-year limited warranty. Our systems are wind rated to 120 mph and are built to withstand a harsh Vermont winter.
